

supply curves are summarized in Table 9-4. The biomass prices are derived endogenously based on the aggregate power sector demand for biomass in each IPM region and state. The results are unique market-clearing prices for each IPM region and state. All plants using biomass from that IPM region and state face the same market-clearing price.

9.3 Nuclear Fuel

The AEO 2023 price for nuclear fuel is used as the nuclear fuel price assumption in EPA 2023 Reference Case. The 2028, 2030, 2035, 2040, 2045, and 2050 prices are 0.71 2022 \$/MMBtu, respectively.

9.4 Waste Fuels

The waste fuels include waste coal, petroleum coke, fossil waste, non-fossil waste, tires, and municipal solid waste (MSW). Table 9-2 describes the characteristics of these fuels, the extent to which they are represented in NEEDS, and the assumptions pertaining to their use and pricing. Furthermore, the fuels are provided to only existing and planned-committed generating units. Potential (new) generating units that the model builds are not given the option to burn these fuels. In the IPM model output, tires, MSW, and non-fossil waste are included under existing non-fossil other plant type, while waste coal and petroleum coke are included under coal plant type.

Table 9-2 Waste Fuels in the EPA 2023 Reference Case

Modeled Fuel in NEEDS	Number of Units in NEEDS	Total Capacity in NEEDS	Description	Supply and Cost	
				Modeled By	Assumed Price
Waste Coal	18	1,364 MW	“Waste coal is a usable material that is a byproduct of previous coal processing operations. It is usually composed of mixed coal, soil, and rock (mine waste). Most waste coal is burned as-is in unconventional fluidized-bed combustors. Waste coal may be partially cleaned by removing some extraneous noncombustible constituents. Waste coal includes fine coal, coal obtained from a refuse bank or slurry dam, anthracite culm, bituminous gob, and lignite waste.” https://www.eia.gov/tools/glossary/index.php?id=W	Supply Curve Based on AEO 2023	AEO 2023
Petroleum Coke	11	1,114 MW	A residual product, high in carbon content and low in hydrogen, from the cracking process used in crude oil refining.	Price Point	\$56.44/Ton
Fossil Waste	54	1,071 MW	Waste products of petroleum or natural gas including blast furnace and coke oven gas. They do not include petroleum coke or waste coal which are specified separately among the modeled fuels.	Price Point	0
Non-Fossil Waste	201	2,136 MW	Non-fossil waste products that do not qualify as biomass. These include waste products of liquid and gaseous renewable fuels (e.g., red, and black liquor from pulping processes and digester gases from wastewater treatment). They do not include urban wood waste which is included in biomass.	Price Point	0
Tires	1	26 MW	Discarded vehicle tires.	Price Point	0
Municipal Solid Waste	147	1,913 MW	Residential solid waste and some nonhazardous commercial, institutional, and industrial wastes. https://www.eia.gov/tools/glossary/index.php?id=M	Price Point	0

9.5 Hydrogen Fuel

The price of hydrogen is assumed to be 9.64 \$/MMBtu.

9.6 Fuel Emission Factors

Table 9-3 brings together all the fuel emission factor assumptions implemented in EPA 2023 Reference Case. For sulfur dioxide, chlorine, and mercury in coal, where emission factors vary widely based on the rank, grade, and supply source of the coal, cross references are given to tables that provide more detailed treatment of the topic. Nitrogen oxides (NO_x) are not included in Table 9-3 because NO_x emissions are a factor of the combustion process and are not primarily fuel based.

Table 9-3 Fuel Emission Factor Assumptions in the EPA 2023 Reference Case

Fuel Type	Carbon Dioxide (lbs/MMBtu)	Sulfur Dioxide (lbs/MMBtu)	Mercury (lbs/TBtu)	HCl (lbs/MMBtu)
Coal				
Bituminous	202.8 - 212.9	0.67 - 7.78	2.80 - 34.71	0.015 - 0.214
Subbituminous	209.2 - 215.7	0.52 - 2.15	2.03 - 8.65	0.007 - 0.014
Lignite	212.6 - 219.3	1.51 - 5.67	7.53 - 30.23	0.011 - 0.036
Natural Gas	117.08	0	0.00014	0
Fuel Oil				
Distillate	161.39	0	0.48	0
Residual	173.91	1.04	0.48	0
Biomass	195	0.08	0.57	0
Waste Fuels				
Waste Coal	204.7	7.78	53.9	0.0921
Petroleum Coke	225.1	7.70	2.66	0.0213
Fossil Waste	321.0	0.08	0	0
Non-Fossil Waste	0	0	0	0
Tires	189.5	1.65	3.58	0.06
Municipal Solid Waste	91.9	0.35	71.85	0

Note:

Table 7-4 has coal emission factor on a coal supply region level.
